

Native Shrubs as Habitat and Host Plants

Saturday, March 11, 2017

9:30 coffee, conversation, displays, handouts

10:00 - 11:15 program

Barrington Village Hall

200 S. Hough Street

(free parking behind building)

You may think of shrubs as privacy screens and attractive additions to your yard, but they are so much more. Help the earth and its wildlife by planting native shrubs. They provide habitat for many creatures, including nesting spots for birds and shelter for birds and other small wildlife. Additionally, they are hosts for many moths and butterflies. Join us to learn how shrubs can sustain pollinators by feeding their larvae and can support the birds who depend on larvae to feed their nestlings.

Our speaker is Connor Shaw, owner of Possibility Place Nursery, CFC's main source of beautiful, healthy native shrubs. He has been growing and selling native woody plants since 1978. He graduated from Utah State University with a Bachelor of Science degree in forest hydrology and a Master of Science in wild land hydrology. His Possibility Place is the area's leading showcase for native arboriculture.

Please join us to learn how to use beautiful native shrubs to sustain birds and native insects.

**Please
RSVP to:**

communityed@citizensforconservation.org or 847-382-SAVE (7283)

To ensure proper registration, please provide your name, phone number and program name.

CFC members attend for free as a benefit of membership. Program fee is \$10.00 for non-members (payable at the door).
